

# EUROX

## EUROX'S PARTNERSHIP WITH SUEZ

*Eurox's commitment to delivering exceptional service and support*

### Client Overview

Suez, a leader in environmental services, required a comprehensive range of PPE, Workwear, Corporate wear and specialist Flame Retardant ARC garments for approximately 10,000 wearers across various UK sites. This involved delivering both bespoke and standard items adhering to CE/ISO international standards.

### The Challenge

Suez's primary challenge was meeting diverse branding requirements, which led to significant product duplication within various categories. This included manufacturing bespoke colours and ensuring a consistent colour palette across the entire range.

### Eurox's Solution

Eurox approached the project methodically, using a GANTT chart to outline milestones and project implementation requirements. This structured approach ensured clear communication and effective tracking of progress.

### Implementation and Support

Eurox introduced innovative suggestions that consolidated various items in the range. This not only resulted in increased volume per item but also contributed to improved wearer comfort and enhanced safety throughout the project. The commitment to addressing Suez's unique branding requirements was evident in the careful attention to manufacturing bespoke colours and maintaining a consistent colour palette across all products.

### Innovative Solutions

To tackle the challenge of product duplication, Eurox provided solutions that streamlined the range while still meeting all branding requirements. This approach increased efficiency and improved the overall user experience for Suez's employees.

### Conclusion

Eurox's approach to the Suez contract exemplifies our commitment to client satisfaction and our ability to overcome unique challenges in the supply of PPE and Workwear. Through innovation, meticulous planning, and a focus on quality, Eurox delivered a tailored solution that met Suez's specific needs, ensuring safety, comfort, and brand consistency across their workforce.
